“Without Chloride protection it would have cost us anywhere from \$7,000 - \$12,000 to replace the POS equipment in this facility.”

*Louie Olivira
Director of Service
for MICROS Retail Systems*

For nearly 35 years, Fromagerie restaurant has been a landmark in Rumson, New Jersey. In 2006, noted restaurateur, chef and cook book author, David Burke, took ownership of the restaurant. Now operating as David Burke Fromagerie, this upscale restaurant provides every customer with the best in fine dining accompanied by unmatched warmth and hospitality. Hailed by the New York Times as “an abundance of upscale deliciousness”, the four stars routinely awarded to the restaurants food could also describe its power protection provided by Chloride.

POS system escapes harm

Around 9:30pm on New Years Eve 2008, the David Burke Fromagerie experienced a power outage due to an overloaded transformer nearby. When the local electric company was called to repair the problem, they sent a power surge or ‘white out’ through the building, nearly damaging all of the electrical equipment inside.

Fortunately, the restaurant had ONEAC ONePlus UPS installed on their Micros® point of sale systems. The power protection provided by Chloride saved the units from being destroyed. Louie Oliveira, Director of Service for MICROS Retail Systems, admits “Without Chloride protection it would have cost us anywhere from \$7,000 - \$12,000 to replace the POS equipment in this facility.”

Site equipment that was not protected by ONEAC brand UPS was burnt and left un-repairable. Harmful consequences, such as the loss of valuable equipment or the cost suffered when businesses are forced to close, were avoided because Chloride power protection solutions were in place.

“We had been battling constant power issues prior to having the ONEAC UPSs installed. Since then, the issues ceased immediately,” says Oliveira. “This site was a perfect example of how bad power can not only disrupt your equipment from performing its best, but as time goes on it will deteriorate the electronic components that make up your POS system.”

About Chloride North America

Chloride is a world leader in providing protection for mission-critical systems and processes from the damaging effects of poor electrical power and power interruptions. The top five manufacturers and OEM providers of POS solutions rely on Chloride’s ONEAC brand UPS and power conditioning products to protect their critical retail applications. The sale of a product is not the end of our relationship with the customer—Chloride is a multi-solution provider, offering both single-phase and three-phase products and solutions specifically designed to meet all your retail and hospitality needs.

ONEAC and ONePlus are registered trademarks of ONEAC. All other trademarks, product and corporate names are the property of their respective owners.
